Investment Objective: The Target Maturity Funds seek current income and capital appreciation. The funds invest primarily in other mutual funds that represent a variety of asset classes and investment styles. The target asset mix is adjusted so that as the target year approaches, the allocation to stocks may decrease and the allocation to bonds and money market instruments may increase. The principal value of an investment is not guaranteed at any time including at or after the target maturity date.

Risk and Return Characteristics: The risk/return profile of each Target Maturity fund is higher or more aggressive when the maturity date is further away, but will automatically rebalance to a more conservative or lower risk/return profile as the funds near the maturity date and beyond.

Where to go for Further Information: *Investors should carefully consider the investment objectives, risks, fees, charges and expenses before investing.
